lifespan <u>of said composite event</u> is dependent upon ~~the~~ <u>an</u> associated event.

9.   (Currently Amended) The method as claimed in claim [[4]] <u>1</u>, wherein a ~~the~~

lifespan <u>of at least one of said temporal events</u> ends at a predetermined time, or recurs

at a predetermined period of time.

10.   (Cancelled).

11.   (Cancelled).

12.   (Currently Amended) The method as claimed in claim 1, further comprising

storing a~~~~ said database rule as an event-condition-action (ECA) rule.

13.   (Currently Amended) A database recorded on a <u>non-transitory</u> computer storage

medium comprising:

    software code means for storing in said database at least one database rule;

    software code means for mapping temporal constraints of an event of ~~the~~ <u>said</u>

database rule to corresponding temporal events;

    software code means for changing said temporal constraints associated with ~~the~~

<u>said</u> temporal events based upon <u>related</u> temporal constraints for related events of said

database rule <u>to provide changed temporal constraints</u>;

    software code means for registering alarms associated with a start and end of a

lifespan of each <u>of said</u> temporal <u>events</u> ~~event~~;

    software code means for selectively deploying and selectively permanently

removing ~~the~~ <u>ones of said</u> temporal events from said database based upon ~~the~~ <u>said</u>

changed temporal constraints; ~~and~~

    software code means for, upon reaching said end of said lifespan of <u>each of</u> said

~~each~~ temporal <u>events</u> ~~event~~, permanently removing from said database said alarm

associated with ~~the~~ <u>said ones of said temporal events</u> permanently removed <u>from said</u>

<u>database</u> ~~temporal event~~<u>;</u>

    <u>software code means for combining said temporal events using a sequence</u>

<u>operator to form a composite event; and</u>

    <u>software code means for associating a lifespan to said composite event using</u>

<u>said sequence operator.</u>

14.   (Currently Amended) A system for monitoring events in a database, said system

comprising <u>a processor performing a method comprising</u>:

    ~~means for~~ storing in said database at least one database rule;

    ~~means for~~ mapping temporal constraints of an event of ~~the~~ <u>said</u> database rule to

corresponding temporal events;

    ~~means for~~ changing said temporal constraints associated with ~~the~~ <u>said</u> temporal

events based upon <u>related</u> temporal constraints for related events of said database rule

<u>to provide changed temporal constraints</u>;

    ~~means for~~ registering alarms associated with a start and end of a lifespan of each

<u>of said</u> temporal <u>events</u> ~~event~~;

    ~~means for~~ selectively deploying and selectively permanently removing <u>ones of</u>

<u>said</u> ~~the~~ temporal events from said database based upon ~~the~~ <u>said</u> changed temporal

constraints; ~~and~~

    ~~means for,~~ upon reaching said end of said lifespan of <u>each of</u> said ~~each~~ temporal

events ~~event~~, permanently removing from said database said alarm associated with

<u>said ones of said temporal events</u> ~~the~~ permanently removed <u>from said database</u>

~~temporal event~~<u>;</u>

<u>combining said temporal events using a sequence operator to form a composite</u>

<u>event; and</u>

<u>associating a lifespan to said composite event using said sequence operator</u>.

15.   (Currently Amended) A <u>non-transitory</u> program storage device <u>medium</u> readable

by computer, tangibly embodying a program of instructions executable by said computer

to perform a method of monitoring events in a database, said method comprising:

storing in said database at least one database rule;

mapping temporal constraints of an event of ~~the~~ <u>said</u> database rule to

corresponding temporal events;

changing said temporal constraints associated with ~~the~~ <u>said</u> temporal events

based upon <u>related</u> temporal constraints for related events of said database rule <u>to</u>

<u>provide changed temporal constraints</u>;

registering alarms associated with a start and end of a lifespan of each <u>of said</u>

temporal <u>events</u> ~~event~~;

selectively deploying and selectively permanently removing the temporal events

from said database based upon ~~the~~ <u>said</u> changed temporal constraints; ~~and~~

upon reaching said end of said lifespan of <u>each of</u> said ~~each~~ temporal <u>events</u>

~~event~~, permanently removing from said database said alarm associated with ~~the~~ <u>said</u>

Reasons For Allowance

6.   The following is an examiner's statement of reasons for allowance:

Regarding independent claims 1 and 13-15, Applicants particular method and associated systems of of monitoring events in a database, said method comprising: upon reaching said end of said lifespan of each of the temporal events, permanently removing from the database the alarm associated with the ones of the temporal events permanently removed from the database; combining the temporal events using a sequence operator to form a composite event; and associating a lifespan to the composite event using said sequence operator, was not disclosed by, would not have been obvious over, nor would have been fairly suggested by the prior art of record.

The dependent claims, being further limiting to the independent claims, definite and enabled by the specification are also allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
